

- Are you happy with your current equipment performance?
- Are you confident of the accuracy levels?
- Is the equipment in an acceptable condition and location?
- What would it take to increase efficiencies and reduce overall running costs?
- Is your current service provider giving you value for money?

Are you looking for answers to these questions?

SRO Technology's team of experienced technicians can Audit and evaluate the current condition of you're:

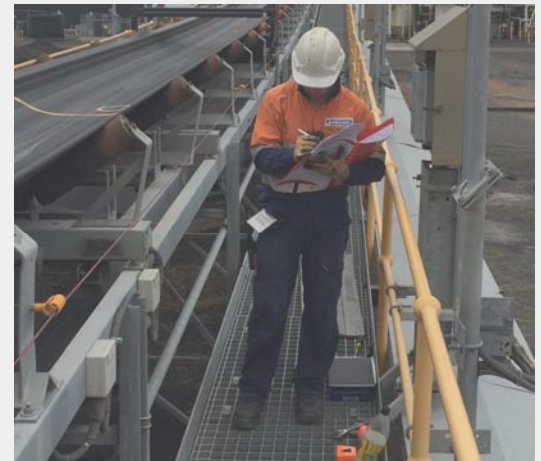

- Belt Scales
- Weigh Belt feeders
- Nucleonic Density gauges
- Cross Belt sampling systems
- Metal detectors
- Bin level and weighing systems

Benefits of an Audit

There are clear benefits to having an audit on your equipment. Often equipment is serviced with the same data and mindset for years without checking the actual changes to current running requirements; this often leads to inaccuracies and reduced efficiency. Even the simple things can be missed.

SRO Technology adopts a set Audit routine on all types of equipment which cover all aspects of ideal setup and maintenance requirements.

We ensure peace of mind that we will report all findings in soft copy and recommend non obligatory corrective action and ongoing maintenance routines.

Authorised Distributor and Service Provider:
