

Weightrax Mobile

WEIGHTRAX

Next-Level Automation from Weightrax Mobile

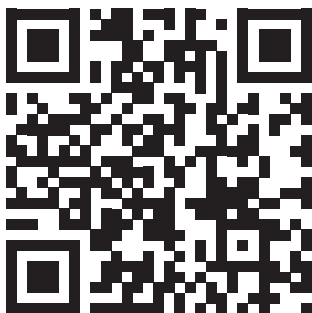

Weightrax Mobile uses ruggedised tablets and the Atrax radio mesh network to deliver wireless data connections to loader drivers and other mobile operators, giving visibility of all onsite vehicles and their orders – even at remote sites with no other connectivity.

Weightrax Mobile is perfect for all types of waste, quarry and other weighbridge operations.

Weightrax Mobile connects with the Weightrax Point of Sale software application. The industrial tablets are rugged enough to perform in harsh conditions day after day.

Weightrax Mobile delivers significant cost savings by removing the need for weighbridge operator staff, increasing the accuracy and efficiency of job handling, and automating critical steps including contactless point of sale and account billing.

Weightrax Mobile – The Benefits

WEIGHTRAX

- ✓ Safer
- ✓ More accurate & efficient
- ✓ More profitable

Ensure correct waste type charges.

At waste transfer or landfill sites, mobile staff can check the waste type declared by each customer and compare it to what is actually being discharged. They have the ability to check and change the declared waste type before the customer checks out of the facility.

Everything done right the first time.

At quarries, loader drivers can see all traffic at the site including each truck's order reference details. It's easy to ensure every truck is loaded and billed for the correct material and volume.

Unattended site? No problem.

Weightrax can be set to 'unattended' mode – no weighbridge operator required. Truck drivers enter information without leaving their truck. Identification options include Automatic Number Plate Recognition (ANPR), PIN number, or swiping a Dallas tag. Weightrax software stores the tare weight, or can use a pre-assigned tare for the identified vehicle. When the truck weighs out, billing is done from this live data. There's no need to visit the site to retrieve data.

A more efficient site.

Weightrax software connects with on-board loader scale systems to receive weight data. This creates a more efficient site by removing the need for printers or paper dockets in loaders. Data from Weightrax is continuously synchronised to the cloud and readily available in real time to accounting and other systems.
