

WEIGHTRAX

Weightrax is a leading manufacturer and supplier of industrial weighing scales, systems and automation equipment for the transport and logistics industries. We provide industrial weighing and control systems, hardware, software, weighbridge servicing and calibration to the New Zealand and Australian markets. Our cloud-based software gives access to weighbridge transactional data in real time, anywhere, anytime. Weightrax is part of the Atrax Group.

Atrax – the proven choice

Atrax is the world leader in the design, manufacture, integration and support of industrial weighing, measurement and related control systems for the airport and logistics industries. Over three million people across more than 155 countries use Atrax products and systems every day. New Zealand owned, we have been in the business for over 35 years. Atrax is the largest manufacturer of scales and systems in the southern hemisphere. ISO accredited for quality, safety, and the environment.

Weightrax Weighbridge Software

WEIGHTRAX

Weightrax cloud-enabled weighbridge software delivers accurate real-time weighbridge transactional data and flexible reporting anywhere, anytime.

Boost productivity and efficiency across your business, lower costs, increase profitability and customer satisfaction, and meet compliance obligations with accurate, real-time weighbridge data and reporting. Forming the backbone of your weighbridge operation, Weightrax software is quite probably the most advanced and feature-rich weighbridge software on the market today.

Weightrax software was first released in 2006 as part of a ground-breaking, web-enabled truck Point of Sale (POS) system. Today, hundreds of sites across New Zealand and Australia use Weightrax software, and thousands of weighbridge transactions are processed daily.

Weightrax software is proven across a range of industries and sectors where weighbridges are used – including landfill, transfer stations, waste management, quarries, Local Government, transport, and logistics.

www.weightrax.com

✓ Easy. Accurate. Bulletproof.

Weightrax software is the backbone of your weighbridge operation. Easy access and real-time data visibility are two of the biggest benefits of Weightrax software. Weightrax captures your weighbridge data and makes this information available in real time, even on isolated sites. It's always accurate and it runs at the weighbridge even if the internet goes down.

Accessible through an easy-to-use software app at operational level, or via a secure website (Weightrax Web) at managerial level to view transactions, call up reports, modify or add information.

✓ Operator friendly

At an operational level, the Weightrax software app is installed at the weighbridge site on an industry-standard touchscreen Point of Sale (POS) PC. It can also run on a self-serve kiosk, or tablet. Simple, intuitive touchscreen layouts, bold graphics and clear instructions on the POS computer, kiosk and tablets make it so easy to use that operator error is practically eliminated. Operators can be up and running after only a few hours of training.

The software easily handles basic and complex transactions, capturing every detail once the vehicle registration is identified.

✓ Faster throughput, happy customers

Because Weightrax software is easy to use you'll find that throughput significantly increases. Greater productivity, reduced queues, and less stress are significant outcomes. And your customers will be happy because of the more streamlined onsite experience.

✓ Lower costs and efficient administration

Weightrax software delivers all the data an administrator could possibly want. Having all the information, reports and summaries at their fingertips means back-office architecture and costs are often significantly reduced. Existing site administration processes are streamlined.

Because Weightrax software is designed to work across a wide range of industry applications, it is quick and easy to install. It's a simple matter to load all the necessary information such as customers, vehicles, registrations, and material pricing.

We know that every customer is different, and we set ourselves apart by configuring the Weightrax software to your needs.

✓ Easy integration for a seamless weighbridge solution

Weightrax software easily integrates with all major brands of weight indicators, as well as our Automatic Number Plate Recognition (ANPR) cameras, and printers. Weightrax also provides high quality weighbridge peripherals like barrier arms, cameras, noise cancelling intercoms, and traffic lights that interface with the software. Weightrax software also interfaces with all major accounting, ERP and back-office-systems.

✓ Streamlined invoicing process

For accounts staff, Weightrax provides weighbridge data for easy importing into major accounting systems. Weightrax also provides an API for automatic billing processes into enterprise systems.

✓ Fast, accurate reporting

Weightrax offers data reporting to suit your precise needs. All relevant management information is readily available to authorised users. A wide range of flexible and customisable reports is available. Generate and send reports automatically, ensuring everyone gets the right reports at the right time.

Compliance reporting: Organisations that need to meet specific compliance reporting requirements, such as New Zealand Councils which are subject to the requirements of the National Waste Data Framework, can be confident that Weightrax software will deliver the data they need to meet their obligations.

✓ Highly secure

Weightrax software has multiple levels of built-in security. All users have secure logins for the Weightrax software app and Weightrax Web. Important customer and pricing information is stored on the highly secure Weightrax Web server and cannot be modified by unauthorised operators or users. All manual overrides must have a reason provided for review and audit purposes. Transactional and operational data is securely stored on the Weightrax Web server and on the application PC at the weighbridge site.

✓ Support and upgrades

Weightrax software is developed, hosted, and supported by Atrax Group. User support and training agreements are available by request. You'll get whatever support you need – locally or remotely – quickly and reliably from the people who know the system inside out. Weightrax software is regularly reviewed and updated to meet market changes and demands. You automatically get the latest upgrades and enhancements as they happen, so you always run the latest version.

✓ Automated data backup

Never lose data, even in the event of theft, flood, fire or other natural or man-made disaster. Your data is always backed up in two places – on your local computer and to the cloud on the Weightrax Web server. Weightrax software backs up every five minutes – so, if your Weightrax software instance is synchronised to Weightrax Web, we can restore most of your data if the unthinkable happens.

✓ Automation increases productivity and profitability

Weightrax software integrates with a range of best-in-class components and automation technologies, enabling weighbridges to achieve greater speed and efficiency with less manpower.

Automatic Number Plate Recognition (ANPR) improves site efficiency and saves running cost. ANPR is easy to fit to any site running Weightrax software.

Kiosks enable driver self-service. Weightrax can be set to **unattended mode**, with no weighbridge operator required. Truck drivers enter information at the kiosk without leaving their truck. Identification options include ANPR, PIN number, swiping a Dallas tag or manually entering a number plate to identify pre-registered trucks and start the weighing in process. Weightrax software stores the tare weight from the weighbridge or can use a pre-assigned tare for the identified vehicle. When the truck weighs out its net weight is calculated, and the transaction is synced up to Weightrax Web within seconds.

Wireless data connections enabled by a **radio mesh network** (Weightrax (WTX) Connect, a subset of Weightrax software) put ruggedised tablets into the hands of loader drivers, giving them visibility of all onsite vehicles and their orders.

Weightrax software enables **remote weighbridge management** – and allows you to operate unmanned sites – with real-time weighbridge transaction data and reporting.
